RE: Additional Sensitivity for the Parker-Davis Project Small Customer Choice Analysis

On behalf of the Town of Thatcher we would like to request that Western evaluate one additional potential option for the Parker-Davis Project Customers to comment on. It is our understanding that Western is evaluating the ability to waive the minimum scheduling requirement for small contractors like Thatcher.

Thatcher is by far the smallest Parker-Davis Project contractor and while waving the minimums on 250 kW winter season and 350 kW summer season entitlements does help Thatcher would like Western evaluate allowing Thatcher to also move winter season energy into the summer season. Thatcher's total winter season energy is approximately 426,000 kWh.

Please call me if you have any questions.
