Webex Housekeeping

• All participants are muted on entry to ensure a smooth remote meeting.

• For questions, please choose one of the following options:
  • Send questions to the host in the Webex chat
  • Use the “Raise Hand” icon next to your name in participant list. The host will unmute and call on you. Click same icon to lower your hand.
  • Unmute yourself on Webex or press *6 if you are only participating by phone

• Will have time for additional questions at the end of the meeting

• Make sure you are not “double-muted” when attempting to talk (i.e. muted on your device in addition to the Webex client)
Agenda

• Welcome and Introductions
• Website Information/Resources
• Rate Convergence Chart with FY 2021 Rates
• Transmission System Overview
• Transmission Pancakes
• Rate Design/Revenue Allocation
• Future Meetings (frequency, logistics)
• Action Items and Meeting Close
Website Information/Resources

• Briefings, FAQ, notes, presentations, and other information is available at:
  
  https://www.wapa.gov/regions/DSW/Rates/Pages/CombinedTransRate.aspx

• FAQ will be updated throughout the process and we will keep you appraised of progress through periodic emails/contact

• Continue preparations for work group meetings later this year

FY 2011 – FY 2021 Rate Convergence

Single System Transmission Rate History

(per kW-mo.)

CRSP  Intertie  P-DP  CAP  ED5 - PV
Transmission System Overview

- Parker-Davis
- Intertie
- CRSP
- CAP
- ED5-PVH
Large Footprint
Colorado River Storage Project

- Constructed as part of the Colorado River Storage Project Act of 1956 to deliver federal hydropower to project use and preference customers in several states.

- System consists of mostly 138-kV, 230-kV and 345-kV high-voltage transmission lines and attendant facilities, including 36 substations, extending across Arizona, New Mexico, Colorado and into portions of Utah and Wyoming. There are over 2,300 transmission line miles with 56% of those line miles in Colorado and 29% in Arizona.

- The fiscal year FY 2021 firm transmission rate for CRSP is $20.27/kW-year based on a revenue requirement of $87.8 million and sales of 4,333 MW.
ED5-Palo Verde Hub Project

• 230-kV transmission line, completed under WAPA’s Transmission Infrastructure Program as a public-private partnership, began commercial operation in 2015

• The transmission line is integrated with the Parker-Davis Project and provides service from the Palo Verde Hub to ED5 Substation south of Phoenix, Arizona

• The FY 2020 firm transmission rate for ED5-PVH is $20.52/kW-year based on a revenue requirement of $3.2 million and sales of 156 MW
Pacific Northwest – Pacific Southwest Intertie Project

• Authorized by the Pacific Northwest Power Marketing Act of 1964

• Originally envisioned to connect the Pacific Northwest to the Pacific Southwest with AC and DC transmission line segments

• The Desert Southwest Region’s portion consists of 230-kV, 345-kV and 500-kV high-voltage transmission lines, including 7 substations, extending across Arizona and California

• The fiscal year FY 2021 firm transmission rate for Intertie is $19.32/kW-year based on a revenue requirement of $30.6 million and sales of 1,584 MW
Central Arizona Project

• Central Arizona Project is one of three related water development projects that make up the Colorado River Basin Project

  • Authorized in 1968 to improve water resources in the Colorado River Basin
  • Transmission facilities include a 230-kV from McCullough Substation in Nevada and interconnects to the Davis and Parker substations in Arizona
  • CAP has capacity rights in the transmission line from Parker to Liberty substations in Arizona. CAP also includes 230-kV lines east of Phoenix, Arizona, and several 115-kV lines that feed pumping stations near Salome and Tucson, Arizona
  • Although not included in the rate set by WAPA, CAP also includes the federal share of capacity in the 500-kV lines of the Navajo Southern Transmission System and the Navajo Western Transmission System

• The calendar year 2020 firm transmission rate for CAP is $21.00/kW-year based on a revenue requirement of $13.2 million and sales of 630 MW

  • Project pumping load represents 540 MW of the 630 MW
Parker-Davis Project

• Formed by consolidating two projects, Parker Dam and Davis Dam, under terms of the Consolidate Parker Dam Power Project and Davis Dam Project Act of May 28, 1954

• Transmission facilities of P-DP include 230-kV lines from Mead Substation in Nevada to Davis, Parker, Liberty and Pinnacle Peak substations in Arizona

• P-DP also includes 161-kV lines from Parker Substation to Yuma, Arizona; 115-kV lines from Phoenix to Southeastern Arizona; and a number of shorter line segments from Mead Substation to other nearby substations in southern Nevada

• The FY 2021 firm transmission rate for P-DP is $20.64/kW-year based on a revenue requirement of $53.2 million and sales of 2,578 MW. Firm electric service and priority use power represent 271 MW of the 2,578 MW.

Transmission Pancakes

• Limited Pancaking now, most Pre-OATT contracts

• Post FERC Order 888 – limited pancaking due to barriers of multiple charges

• Existing DSW/CRSP Pancaking
  • CRSP Customers on PDP system
  • Public Service Company of New Mexico Palo Verde Wheeling Arrangements
Opportunities without Pancakes

• Possible capacity to be sold out of our ties from Palo Verde and Westwing (close to Palo Verde).
• Customers may explore cheaper energy resources at the Palo Verde hub to serve their load.
• Additional capacity exporting to California on the Intertie system.
  • More transactions from PDP/CRSP customers with excess generation will be submitted for sales to California.
Conceptual Rate Design and Revenue Allocation

- This rate design/revenue allocation is an illustrative model intended to be a starting point for discussions.
- The amounts included in the workbook are approximations used for illustrative purposes.
- Systems will continue to use their individual rate methodologies to determine costs.
- Firm electric service will pay their proportionate share of combined costs.
- Offsetting revenues will be combined/pooled and allocated along with firm revenues.
- Revenue will be allocated based on individual system costs.
- Under/Over-Collections will be handled according to each system's individual rate methodology.
## Step 1 - Determine Combined System Revenue Requirements

The dollar amount to be collected from firm sales - numerator

Rate Design

**Step 3 - Calculate Combined Rate**
(to be charged for sales)

\[
\text{Revenue Requirements} = \frac{\$179,428,187}{8,907,693 \text{ kW}} = \$20.14/\text{kW-Year} \quad \text{or} \quad \$1.68/\text{kW-Month}
\]

**Step 4 - Determine Amount to Be Collected via CRSP SLIP Rate**
(CRSP SLIP is not charged a transmission rate, so this step ensures it receives a proportionate share of the costs)

\[
\begin{align*}
\text{FES/Merchant Reservations} & \quad \times \quad \text{Combined Rate} \\
3,512,886 \text{ kW} & \quad \times \quad $20.14/\text{kW-Year} = $70,760,270
\end{align*}
\]
### Step 1 - Determine Revenue Allocation Percentages Based on Rate Calculation

(how revenue from the combined rate will be distributed)

<table>
