

I am a <sup>N. employee</sup> ~~consumer~~ of an electric utility that buys power from the Western Area Power Administration in the Pick-Sloan Missouri Basin Program. "I am writing to support Western's November 1, 2013, Federal Register recommendation to "Pursue Regional Transmission Organization Membership."

Western and the other owners of the Integrated System (Basin Electric Power Cooperative and Heartland Consumers Power District) have studied Regional Transmission Organization membership for several years, culminating in the Alternative Operations Study. That study recommended Western move forward in seeking RTO membership in the Southwest Power Pool ("SPP"). SPP membership would provide Western with better access to markets for purchasing power to meet its preference customer load and for selling surplus power. SPP's structure is more philosophically aligned with Western's and its preference customers' business models. SPP membership will also provide Western and its customers with greater financial benefits and lower risks than other alternatives.

**I support Western seeking membership in the Southwest Power Pool as described in the Federal Register Notice and urge moving forward with its recommendations as soon as possible.**

I am a consumer of an electric utility that buys power from the Western Area Power Administration in the Pick-Sloan Missouri Basin Program. "I am writing to support Western's November 1, 2013, Federal Register recommendation to "Pursue Regional Transmission Organization Membership."

Western and the other owners of the Integrated System (Basin Electric Power Cooperative and Heartland Consumers Power District) have studied Regional Transmission Organization membership for several years, culminating in the Alternative Operations Study. That study recommended Western move forward in seeking RTO membership in the Southwest Power Pool ("SPP"). SPP membership would provide Western with better access to markets for purchasing power to meet its preference customer load and for selling surplus power. SPP's structure is more philosophically aligned with Western's and its preference customers' business models. SPP membership will also provide Western and its customers with greater financial benefits and lower risks than other alternatives.

**I support Western seeking membership in the Southwest Power Pool as described in the Federal Register Notice and urge moving forward with its recommendations as soon as possible.**

I am a consumer of an electric utility that buys power from the Western Area Power Administration in the Pick-Sloan Missouri Basin Program. "I am writing to support Western's November 1, 2013, Federal Register recommendation to "Pursue Regional Transmission Organization Membership."

Western and the other owners of the Integrated System (Basin Electric Power Cooperative and Heartland Consumers Power District) have studied Regional Transmission Organization membership for several years, culminating in the Alternative Operations Study. That study recommended Western move forward in seeking RTO membership in the Southwest Power Pool ("SPP"). SPP membership would provide Western with better access to markets for purchasing power to meet its preference customer load and for selling surplus power. SPP's structure is more philosophically aligned with Western's and its preference customers' business models. SPP membership will also provide Western and its customers with greater financial benefits and lower risks than other alternatives.

**I support Western seeking membership in the Southwest Power Pool as described in the Federal Register Notice and urge moving forward with its recommendations as soon as possible.**
