

NOTICE

Western's Upper Great Plains Region (UGPR) Power Marketing staff is in the process of evaluating options proposed by the Midwest Independent Transmission System Operator (MISO), including an option to move the UGPR generation and loads into the MISO locational marginal pricing (LMP) market. UGPR Power Marketing's evaluation process has been delayed for approximately 30 days to correlate with MISO's anticipated filing of schedules with the Federal Energy Regulatory Commission (FERC) in December 2007.

UGPR Power Marketing plans to send letters to customers in December 2007 and hold an informational meeting in January 2008 regarding this evaluation process. However, the timeline may be extended if the MISO filings of the proposed schedules with FERC are delayed or the proposed schedules are changed significantly before filing.
